The increasing role of the tourist scope of activity in the economy of many countries and regions of the world rationalized the proposed topic of the research. The development of tourism in the cross-border regions of Russia is regarded as a promising/priority trend for the regional development. At the turn of 20th–21st centuries in age of globalization and integration processes in the international community the socio-economic changes in Russia have brought dramatic changes in the logic of the development of Russian regions, and have formed the basis of the intensification of development and utilization of the capacity of cross-border areas, including tourist and recreational development. The purpose of the research is to describe the results of the study of qualitative changes in the development of tourism in the cross-border regions of Russia. The article represents the methodological approach to the assessment of the development of tourism and recreation activities of cross-border regions of Russia, as well as it substantiates the long-term benefits of tourism and recreation development. The study is carried out with a comparative analysis of the development of tourism indicators in Russia and thirty-seven regions, which have the land state border, for the period of 2002-2014 yrs. The holistic character of the research is contingent upon taking into account the reasonable and sufficient key indicators of tourist scope of activity: the tourism and hotel services, the dynamics of tourist mobility, and the development of tourist infrastructure. The article has theoretical and practical relevance for the scientists, researching the problems of development of tourism in the cross-border belt of Russia, for the authorities of the cross-border regions, as well as for the representatives of tourism industry.

Key words: Cross-border region, Russia, The development of tourism, Tourism infrastructure, Tourism services, Hotel services, Tourist flow

INTRODUCTION

At the turn of 20th–21st centuries in age of globalization and integration processes in the international community the socio-economic changes in Russia have brought dramatic changes in the logic of the development of Russian regions, and have formed the basis of the intensification of development and utilization of the capacity of cross-border areas, including tourist and recreational development. The development of tourism in the cross-border regions of Russia is turning into a promising/priority trend for the regional development, contributing to the improvement of employment and self-employment of the local population, the flow of income to the budget at all levels, the preservation and restoration of cultural, historical and natural heritage of territories. The specific character of the economic and geographical location, the unique tourist and recreational potential of cross-border regions, which reveals the opportunities for developing different types of tourism, and changing the perception of tourism as a scope of economic activity at the level of government, business and society - all these contributed into creating a favorable basis for the development of tourism vector of development for the cross-border constituent entities of the Russian Federation. Having acknowledged the tourism as a promising/priority trend of development of cross-border regions of Russia, we

Original Scientific Paper
see it fit-for-purpose to identify common trends, specific features and benefits of tourism development to improve the efficiency of the regional tourism industry and the regional economy as a whole.

**LITERATURE REVIEW**

Closer attention to the tourism and recreational development of cross-border areas leads to increase in the number of research works of the Russian scholars, revealing the current state, the specific features and efficiency of the tourism industry in the cross-border regions of Russia. One should specify that that during the Soviet period of the state development the specific economic and geographical loca-tion of cross-border regions (especially those bordering upon the capitalist countries), as well as the not accepting tourism as an area of economic activity at the level of state, business and society, did not allow for the use of existing unique tourist and recrea-tional potential of territories.

In the current context, the cross-border regions were given an opportunity to develop tourist and recreational scope of activity and to stir it up based on the social and economic development. The profes-sor of Lomonosov Moscow State University A.Yu. Alexandrova has put it in the following way: ‘the cross-border areas ... have the potential for development ... but ... their functionality is reduced to a mini-mum, so that it is important for the cross-border territories to ac-quire tourism functions’ [02]. Opportuni-ties and prospects of development of cross-border coop-eration in the tourism sector, tailoring cross-bor-ders tourist destinations, while taking into account the best practices of cross-border international destinations, may determine the relative advan-tage of cross-border areas in the development of tourism industry in comparison to the hinterland territories of the state.

The growing impact of tourism on the socio-economic development of cross-border regions rationalizes the problems of research on the processes of mobility, tourism and the migration of citizens in the world community [06, 08, 11, 14, 18-21]. Over the last years, the number of works by Russian scholars, presenting numerous as-pects of cooperation between the cross-border regions of Russia with the neigh-boring countries in the context of the tourist mobility, is increas-ing. [10, 15]. Given the key role of the develop-ment of tourism infrastructure in the functioning of the regional tourism industry, the scholars have accumulated considerable research ca-pacity for understanding and comprehending the current state, the specific features and problems of development of tourist infrastructure in some cross-border regions of Russia [05, 09, 13, and 17]. The studies of issues of development of tourist and recreational complex of cross-border regions [16, 17], the issues of cross-border and trans-border cooperation in the field of tourism are of special interest [03, 07, 09, 12, 22]. How-ever, the accumulated research capacity, due to the re-gional nature of the existing developments, does not allow to fully modeling the com-prehensive insight into general trends and spe-cific features of the development of tourism in the cross-border belt of Russia.

**PROBLEM STATEMENT AND METHODOLOGY**

The paper proposes the approach, which allows validating the qualitative changes in the develop-ment of tourism, identifying common trends and patterns of tourism and recreation activities in the cross-border regions of Russia. The study is carried out with a comparative analysis of the development of tourism indicators in Russia and thirty-seven regions, which have the land state border, for the period of 2002-2014. The holistic character of the research is contingent upon taking into account the reasonable and suf-ficient key indicators of tourist scope of activity: the tourism and hotel services, the dynamics of tourist mobility, and the development of tourist infrastructure.

The study utilizes the analysis of the conceptual and terminological system, method of analogies, a group of statistical methods, including the method of regression analysis and a method of analyzing the dynamics of the series.

**RESULTS AND DISCUSSION**

The methodological approach to the assess-ment of the development of the international tourism in the cross-border regions of Russia

At the turn of 20th-21st centuries in age of global-ization and integration processes in the interna-tional community the socio-economic changes in Russia have impacted the volumes and destina-tions of inbound and outbound tourist flows; the
development of international tourism has undergone significant changes, both at the state level and at the level of an individual.

The dynamics of inbound and outbound tourist flows on the territory of the thirty-seven cross-border regions for the period of 2005-2014 correlates with the national trends. On the one hand, a steady increase in the number of Russian citizens, who went on tours, characterizes the welfare of the local population, living on the territory of the cross-border regions of the Russian Federation, and can be regarded as a positive trend. On the other hand, the dominant part of the tours purchased are tours abroad with a slight increase in the number of domestic tours purchased by the Russians. However, the external factors (such as Ruble’s exchange rate, the threat of terrorist attacks, etc.) can eventually have a significant impact on changing preferences in the choice of holiday destinations and on redistributing the tourist flow of the Russians. In addition, one can observe the competence improvement of a modern Russian tourist: an independent booking, tour purchasing, and other tourism and related services on the Internet, without any support by tourism organizations. Thus, there was a growth record for flight reservations across Russia (the most common domestic flights were booked online) in 2014. According to the online travel hypermarket DaTravel.com, the share of the Russians who planned their leisure activities by themselves has increased to 32% in 2015 (2014 - 22%, 2013 - 9%). For instance, the Russian cross-border regions bordering upon far-abroad countries can be characterized as the regions of the greatest tourist attraction.

The following regions are the leading regions in hosting the international travellers: the Republic of Karelia, the Primorsky Krai, the Amur Region, the Kaliningrad region and the Sakhalin region. The practice of a visa-free regime for foreign citizens, those who arrive in the territory of the Russian Federation on Passenger Ferries for a period up to 72 hours for the tourist purposes, into the harbors of St. Petersburg, Vladivostok, Vyborg, Kaliningrad, Korsakov, Novorossiysk and Sochi [01] breaks new ground of generating tourist flows from abroad, and building the socio-economic benefit to the regional development of the cross-border regions of Russia.

The cross-border tourism, including tourist mutual migration between the territories of neighboring countries [15], acquires particular importance in the development of international tourism in the cross-border regions. Thus, in the case when the volume of the flow of inbound tourists from the neighboring state to the territory of the Russian Federation is insignificant in the total inbound tourist flow, it still can be tangible to the cross-border region. Moreover, the incomes earned in the region and the socio-economic benefits arising from the development of this type of economic activity, could be significant at the regional level [15]. For example, in some cross-border regions there is a stable development dependency of the international inbound tourism on tourist preferences of a certain far-abroad state (Table 1).

Note: hereinafter, the calculation is based on the sources
The most dependent on the preferences of Chinese tourists are the Jewish Autonomous Region, where the average value of the index for the period of 2005-2014 yrs. is 100%, the Amur region (99.9%, the minimum value of 99.7%) and the Primorski Krai (83.8%; 49.4%). Similarly, the Republic of Karelia is dependent on Finland (98.7%; 90.6%) the Khabarovsk Krai - on Japan (68.1%; 52.4%) and the Kaliningrad Region on Germany (71.5%; 48.3%). The results show, on the one hand, the advantage of the cross-border regions as attractive tourist areas over the other regions of the Russian Federation, on the other hand, a certain degree of dependency on the preferences of international travellers is fraught with certain risks. [15]

The methodological approach to the assessment of the development of tourism and hotel services

During the period of 1997-2014 there have been a steady growth in the tourist services provided in the Russian Federation, and the third-ranked tourist services (in average 28.6%) are in the cross-border regions of Russia (Figure 1).

Changes in the approaches to the management of tourism development, closer attention to the development of domestic and international tourism at the federal and regional levels of authority realized in a sustainable growth dynamics of the main indicators. Thus, the growth of tourism services provided in the cross-border regions was 14.5 times for the period of 2002-2014, the growth of hotel services - 9.6 times. It is worth emphasizing that the development of hotel services largely determines the development of the tourism industry, but not only the development of the excursion part, considering the multiplier effect that this scope of economic activity produces in the regions.

For this purpose, building the tourism infrastructure that meets international standards in the cross-border regions is regarded as the basis for the development of tourism industry and the provision of a wide range of competitive tourism services, contributing to the attraction of tourist flows in terms of inter-regional and international competition for tourists and investment. On the contrary, the constraints, determined by the level of the tourism infrastructure development (lack of the development, deterioration, a significant territorial differentiation, etc.) prevent from unlocking the tourism potential of the area, eventually reducing the tourist capacity of the region. [16]

Juxtaposing the average performance of the tourism infrastructure development in the cross-border regions of Russia and in Russia as a whole in 2014 (for more details see [16]) rationalizes a certain dependency of the development of tourism infrastructure in the region on the spatial position of the latter to the state border. This was
largely determined by the specific character of the development of cross-border areas, taking into account the function that the state border has performed for a long period in the history of the state. However, with the changes in the perception of tourism, and acknowledging this sphere of activity as the (new) promising and / or priority trend of socio-economic development of regions at the level of government, business and society, we can observe the process of intensive development of tourism infrastructure, especially the accommodation infrastructure [16].

Thus, the influence of the state border on the development of accommodation infrastructure is visible in the advanced dynamics of growth rates in cross-border regions, compared with the average Russian indicators: the increase in the number of hotels for the period of 2002-2014 has been 2.8 times and 2.35 times; increase in the number of room in the hotels has been 2.77 times and 2.56 times, respectively. It is worth emphasizing that the priority rates of accommodation infrastructure for the research period has been achieved through intensive development of the number of rooms in cross-border regions, neighboring with far-abroad countries (almost 2.2 times increase). [16]

During the period of 2002-2014 there have been a steady trend of growth rate of availability of accommodation infrastructure in cross-border regions (rooms in hotels and similar accommodation facilities, per 1 thou. pers.), which indicates the potential and prospects of development of tourism industry in these regions (Table 2).

This is particularly evident in the regions of Russia, bordering upon the far abroad countries, where the dominant barrier function of the state border in the Soviet period of history (with the capitalist countries) restricted the transfer of goods, services, people mobility, and the possibility of economic development of the territories.

**CONCLUSION**

The results substantiate the qualitative changes in the development of tourism in the cross-border regions of Russia. The analysis of indicators of tourism development in the cross-border regions elicits the high tourist attractiveness for international travellers, as well as the potential and prospects of these regions for the development of tourism and recreation activities. Tailoring cross-border tourist destinations seems to be one of the tools to increase the efficiency of the functioning of tourism, to strengthen the competitiveness of the territory on the market of tourist services, to stimulate social and economic development of cross-border regions. Moreover, the tourist vector of development contributes to the preservation and restoration of natural, cultural and economic potential of the cross-border regions of Russia. However, there are a number of systemic problems of the functioning of the tourism industry, that are common for the majority of the Russian regions and typical of cross-border Russian constituent entities; so, these problems can be solved by a comprehensive approach with consolidated efforts of government, business and society. The level and the quality of functioning of tourism and transport infrastructure [04, 16] are crucial while developing the tourism industry, and the possibility of using the tourism potential of the region (including the transport accessibility). Further research assumes the design of a set of incentives and tools to support the tourist development of cross-border regions; it will also focus on the development measures for regional economic policy in the tourism domain, aiming at increasing the use of tourist and recreational potential of the territory (without damaging the environment), and will focus on improving the quality of life of the Russian population in the context of leisure and recreation.
