The Earth is facing an unprecedented crisis that threatens the delicate balance of ecosystems, human health, and the future of our planet. This presentation delves into the Planetary Health perspective, a comprehensive approach that underscores the interdependencies between human health and the health of our planet. By examining the multifaceted impacts of climate change, biodiversity loss, pollution, and changing disease patterns, we highlight the urgent need for systemic change and collaborative action.

Central to this transformative agenda is the recognition that the Great Transition towards a sustainable future is unattainable without comprehensive education. Achieving a just, global transition in the way we live, build cities, grow food, and plan and raise families demands a transformative change in how we perceive our role and interconnection with nature.

Our goal is to inspire and mobilize stakeholders across sectors to adopt a Planetary Health framework, fostering resilience and sustainability in the face of the Earth crisis. This urgent call to action aims to galvanize collective efforts towards a healthier planet and a healthier future for all, with education as a cornerstone of this global movement.
