Individual and Collective Consciousness and their Global Significance: Consciousness has been the central theme from the very beginning of philosophy. The first attempts to explain its nature appeared in psychology in the 19th century through personality theory, and then parapsychology, which contributed to the modern holistic drift of *Integrative Medicine*. This problem is further explored by *Quantum Mechanics* and *Artificial Intelligence*. Within *Quantum-Holographic/Quantum-Gravitational Framework of Consciousness*, *Transpersonal Phenomena* are of psychosomatic nature, with the central role of *Acupuncture System* which can be in a blocked state. This leads to personal disintegration as is in some forms of addictions. The unraveling of the *Transpersonal Energy Blockade* (Ayurvedic/Qigong/Reiki) initiates the process of permanent healing even at the level of *Collective Consciousness*. As a net-effect, such interventions can permanently remove the mutual conflicts at the level of the entire world.

Global Conflicts and Public Health Significance: From the holistic point of view, the *System of Universal Laws of Implicit Order* (God) created the world of natural laws and *Boundary Conditions*. This system evolved with the creation of Man. The social evolution of Man, resulting from the complex organization of billions of interpersonal relationships, has led to conflicts of global proportions that create the *Load Network* at the level of *Collective Consciousness*. Man has the power to change the *Boundary Conditions* by praying, through the introduction of new portions of *Vital Energy* into the *Global Interactive System*. The practical implications lead to redefining the global political scene and goals of *Civilization*. Man's ultimate task is relieving these accumulated burdens.

Conclusion: If the *Holographic Paradigm* (Talbot' concept of the Universe as a huge Hologram) is integrated with the *Cartesian Paradigm*, it would not only lead to the global relief of existing international conflicts/wars, but the achieved global social prosperity would lead to far higher level of *Public Health*. The *Collective Consciousness Morphogenetic Network*, as a communication mediator with *Universal Consciousness*, would have a very favorable psychosomatic global, public health effect. Therefore, work on the integrative *Cartesian/Holographic Paradigm* is of the utmost importance with not only individual but also global *Public Health Significance*.
