The Serbian Journal of the Medical Chamber is published by the Medical Chamber of Serbia, with the University of Belgrade Institute for Medical Research as co-publisher. The Journal annually publishes a minimum of forty previously unpublished original scientific research articles, professional papers, reviews, short communications, editorials, meta-analyses, case reports, and other articles, in all areas of medicine, pharmacy, and dental medicine, in both Serbian and English. It is published four times a year under an open-access policy, using a double-blind peer-review process, and is available in both print and electronic formats.

The Journal fosters continued professional development and free and open exchange of scientific knowledge, research results, breakthroughs, and clinical experience by providing open, free-of-charge, and unlimited access to all articles immediately upon online publication and charging no fees for article submission or processing.

Eminent national and international academicians, professors, and experts constitute the Editorial Board, Advisory Board, and Editorial Office of the Journal. In 2023, the Journal received the M54 categorization from the Ministry of Science, Technological Development and Innovation of the Republic of Serbia. It is indexed by the Serbian Citation Index, and data on the Journal can be found on KoBSON.

Responding to one of the greatest global public health challenges in modern history, the Journal dedicated one of its earlier issues to the COVID-19 pandemic, inviting medical professionals to contribute to the understanding of this disease by sharing research results and clinical experience. The Journal continues to provide a platform for various nationally, regionally, and internationally relevant public health issues by publishing articles focusing on topics such as HIV/AIDS, smoking, immunization, infectious disease control, preventive measures in primary health care, the prevalence of depression, non-medical prescription drug use, safety and health issues pertaining to the medical profession, etc.

Celebrating the fourth anniversary of its first issue, as a relatively new journal, the Serbian Journal of the Medical Chamber strives to complement the activity of other Serbian medical journals with a much longer and more established tradition, such as the Serbian Journal of Public Health, published by the Institute of Public Health of Serbia *Dr Milan Jovanović Batut*.
